## High-End Digital Photography for Architectural Photographers

Introducing Schneider's new DIGITARXL 5,6/35mm lens, designed for excellent performance optimised for digital high-end photography in a dedicated lens mount combined with a universal mount for many digital camera backs on the existing Cambo Wide DS body, Cambo offers a unique camera for the architectural shooter who needs perspective control in combination with digital wide angle photography.

The Cambo Wide DS-350 is a complete camera that accepts digital backs such as Leaf, PhaseOne, Imacon, EyeLike or Sinar with mounts for Hasselblad V-series, Hasselblad H-1, Mamiya 645AFD or Contax 645 compatible backs. The preferred chipsize is the current 22 megapixel format of approx. 4x5 cm.

The Wide DS 's double shift allows for combined vertical and horizontal movements for perspective control.

The movement in the "filmplane" even offers the possibility for stitching images together utilising the lens' maximum viewing angle. Schneider's Digitar 35 XL offers up to 90 mm of image circle (102°) with high optical resolution, which allows for up to 20 mm shift in any direction without loss of image quality.

**Wide DS 350 shown with optional Leaf Valeo 22**

Most of the recent digital backs offer portability with built-in storage and image review, which offers great opportunities in combination with Cambo's Wide DS system for interior, exterior and landscape photography and high resolution images for the demanding professional photographer.
