The background of the book cover is a photograph of the Yaquina Head Lighthouse on a grassy cliff. In the distance, across the water, is the iconic sea stack known as Cannon Rock. The scene is captured in a soft, hazy light, possibly during dawn or dusk, with the lighthouse and the sea stack reflected in the calm water in the foreground.

THE ART OF OPTICS

Leica D-Lux 3 @ 15.6 mm ISO 100 F/6.3 @ 1/1300

Daytona Beach, Florida 2007

There's something to be said for a camera so small that one can fit it into the front pocket of a pair of jeans. After all, such a camera can be with one almost all the time. But while there is an almost dizzying range of pocket digital cameras for sale right now, few of them are designed to provide the kind of control and flexibility that a serious photographer may want or need. I've argued before that the best camera in the world is of little use to a person if it is not with him when needed. A corollary to that might be that a camera that one always has at hand is of limited usefulness if it won't do what one needs it to do.

For a pocket digital camera to be useful to me, it needs to have manual controls for aperture, shutter speed, ISO and focus as well as the ability to record RAW files with a minimum delay between exposures. It also needs to have a usable finder that allows me to clearly see my subject in detail, no matter what the lighting conditions might be. Finally, the files it produces need to be of sufficient quality (broadly defined) that I can be satisfied with prints made from them.
