

CANON

T 90

SERVICE MANUAL

EXPLODED VIEWS

AND

PARTS LIST

CANON INC. JAPAN

Preliminary Instructions

1. Electronic and written materials for the T90 have been integrated to make them even more valuable training aids. These instructions are designed to be used as a textbook with the video tape. Adjustments are explained as the stripdown progresses, rather than in a separate section.
2. Units and assemblies have been favored over individual parts in establishing the spare parts list. If unlisted individual parts are required, replace the unit or assembly. After a year of field experience, we will review the spare parts policy.
3. Accuracy of shutter speed and EV testing devices previously supplied by Camera Service are only guaranteed to 1/1000 second. Since this camera has 1/4000 second maximum shutter speed, care is necessary. We recommend using the new model tester (S-2201) which is guaranteed through 1/4000 second, but since this will not be possible in all cases, we have included alternate instructions for using the Multi-Shutter Tester EF-500 and an oscilloscope. See page 4. Shutter speeds faster than 1/1000 should not be used to check film plane exposure with the EF-500 either. If 1/4000 is used, the EF-500 will indicate overexposure when the exposure is actually correct.
4. This is the first Canon SLR to incorporate TTL-OTF flash metering. Because this system measures light reflected off of the film surface, a special film plane sensor that simulates the film surface must be used on the EF-500. This sensor is called the DIR-201 and it can only be used on units which are equipped with the necessary circuits for TTL-OTF flash metering. This modification was originally made for Olympus cameras but has recently been included on all EF-500s. If you have an older model, contact your local Kyoritsu agent for modification information.

5. This model's PMS shutter is different from the EMAS shutter used in the other T series cameras. Both curtains can be adjusted with the shutter mounted in the body so a special shutter mount for adjustment is not necessary. The curtain speeds and X sync can be adjusted with the shutter mounted in the body but operating independently. Shutter speed can only be adjusted after the electrical assembly is complete. The shutter is more expensive, so shutter repair, rather than replacement is recommended.
6. If power is applied directly to the camera with the battery case removed, solder a lead from the reset pad on the DC/DC convertor and connect it to the ground side of the DC power supply before power is applied to the camera. After power is applied, remove the lead from the ground. If this is not done the camera may not operate.
7. Color Code

To save space on drawings, it has been necessary to use a color code. The code is:

Color	Code	Color	Code	Color	Code
Black	BL	Blue	BU	Gold	GL
Brown	BR	Violet	V	Tan	T
Red	R	Purple	PR	Pink	PK
Orange	O	Gray	GY	Sky Blue	SB
Yellow	Y	White	W	Yellowish Green	YG
Green	GN	Silver	S

I. Front & Top Covers, Battery Case Removal

Disassembly to the extent shown allows the following adjustments to be performed.

Index No.	Adjustment (Page No.)
4	Shutter Speed (3,4); Flash Aperture Info (5); Flash FELK, TTL intensity (6); Winding Inhibit V (6)
11	Film Leader Adj. (7); P meter pattern position (8); Offset Adj (9); Aperture Accuracy (10); Gain & Level (11, 12); Finder LCD (11)
18	Curtain TT (2,3) (2nd Ctn- remove Ext LCD screws also)

1. Front Cover (4)

1.1 To remove the front cover (4), lift the hook cover (19).

1.2 When reassembling, slip the left (grip) end of the cover in first.

2. Top Cover (11)

Nine lead wires (one is shielded) connect the main flex to the top cover.

3. Battery Case (18)

Six lead wires connect the motor flex and DC/DC convertor with the remote switch and battery contact.

ADJUSTMENTS POSSIBLE AFTER REMOVING FRONT COVER

R10: Winding Inhibit Voltage Adj.
(Necessary when IC4 changed)

VR8: 1/4000 Sec. Shutter Speed Adj.

VR5: Flash Aperture Information
(Use flash with manual f/No set)

VR6: Flash FLEK Intensity
VR7: Flash TTL Intensity

Shutter Speed Adjustments

Adjust if IC4, the main flex, or shutter unit is replaced.
Use test equipment capable of measuring 1/4000 sec. (EF-500 can only accurately measure 1/1000 sec.)

Standards:

Curtain Travel Time 2.7 $\pm$ 0.2ms (EF-500 O.K.)(10.5mm slits)

Shutter Speeds 1/4000 sec.: 0.300ms Slow (+) limit
0.244ms $\pm$ 0.3EV
0.198ms Fast (-) limit

Flash (X) Sync. A Line: Over 0.2ms
B Line: Over 1.6ms
(See pg. 5 for details)

Adjust VR8 so 1/4000 is as near 0.244ms as possible, and check the other speeds. See the Shutter Speed/EV chart for tolerances.
The 1st curtain worm gear adjustment is possible after the battery case is removed. Adjustment is like the EMAS shutter.
(To adjust the 2nd curtain travel time, the external LCD must also be displaced, and the main flex lifted slightly. This adjustment is also like the EMAS.)

X sync is adjusted with the eccentric screw beside the lens mount.

ADJUSTMENTS

ALTERNATE ADJUSTMENTS

1/4000 sec. Adjustment with Oscilloscope

This adjustment uses the photosensor of the EF-500 connected to an oscilloscope to check the 1/4000 sec. shutter speed. Before this adjustment, adjust the curtain travel time with the EF-500.

Procedure

1. Connect the EF-500 photosensor to the oscilloscope as shown.
2. Set the EF500 to EV12 and K14.03. Put the photosensor in the film aperture.
3. Set the camera to a long shutter speed or bulb, and release the shutter. While the shutter is open, adjust the variable resistor so the line on the oscilloscope is on 0.5V.
4. Reset the EF500 to EV15 and the camera to a 4000th, and release the shutter.
5. Read the width of the waveform at 2V. It should be 294 us.
6. Adjust VR8 so the width at 2V is as close as possible to 294us.

Note Using the EF-500 to adjust 1/4000 sec. will result in a slow shutter speed (about 0.37ms). The EF-500 can be used by taking an average of several good cameras. Another possibility is adjusting at 1/1000sec. as a midpoint, but since the accuracy of the EF-500 is $\pm 0.1\text{EV}$, this would allow a $\pm 0.4\text{EV}$ at 1/4000 sec. even if the 1/1000 sec. adjustment was perfect (0.98ms). Because of the possible error, we do not recommend this method.

2. Flash Aperture Information (AVEF)

Adjust when IC4 or main flex is changed.

Standard: Selected Aperture ± 0.4 f/stops

Tools: Standard tool 50mm f/1.4; Speedlite with manual aperture setting (277T, A-series Speedlite).

Adjustment:

1. Adjust VR5 until the f/stop displayed in the viewfinder matches the one set on the speedlite.
2. Release the shutter and check that the lens stops down to the displayed aperture ± 0.4 f/stops.

ALTERNATE ADJUSTMENTS

If an appropriate speedlite is not available, use a hot shoe (foot) from an A or T series flash and,

1. Read and record the VC voltage at the CCC terminal.
2. Apply VC to the AVEF terminal to set f/4.0.
3. Install a 3Kohm resistor between CCC and ground to set the flash mode (1/250).
4. Turn SW1 on and adjust VR5 so f/4 appears in the finder.

C.C.C Current

I (μ A)	Mode
0	A E
250	1st Cur. sync (non-ded.)
400	1st Cur. sync (dedicated)
800	2nd Cur. sync (dedicated)

AVEF Voltage

F.No	AVEF V
1.4	$VC + 3/16 VC$
2.0	$VC + 2/16 VC$
2.8	$VC + 1/16 VC$
4.0	VC
5.6	$VC - 1/16 VC$
8.0	$VC - 2/16 VC$
11	$VC - 3/16 VC$

To check X sync, wire as above and set shutter speed priority (TV). Connect the sync to the shutter tester. The tester should read:

Flash (X) Sync.

A Line: Over 0.2ms

B Line: Over 1.6ms

ADJUSTMENTS

- 3.& 4. Flash FELK & TTL Intensity Adjustments
Adjust if main flex is changed.

Standard: $+0.7 \pm 0.5$

Tools: Speedlite 300TL, EF-500 with DIR-201 photoreceptor,
18% gray card (2m X 1m), FD 50mm f/1.4 lens.

Adjustment:

1. Lower the ambient light to EV6 or less, and set the EF-500 to the DIR-201 mode and K=12.5.
2. Point the camera directly at the gray card at a distance of two meters.

Adjustment:	FELK	TTL
3. Equipment Settings:		
Shutter Speed	1/250	
Aperture	f/5.6(Stop-down mode)	f/5.6(Manual mode)
ISO	100	

- | Adjustment | VR6 | VR7 |
|---|----------|------------------|
| 4. Set flash to 35mm and mode to: | FEL Mode | TTL Program Mode |
| 5. Put the EF-500 photosensor in the film aperture, press the spot button, and after the preflash, release the shutter. | | |
| 6. Adjust until the EF-500 reading is within ± 0.5 f/stop of the standard, with the appropriate variable resistor. | | |

ALTERNATE ADJUSTMENTS

If your EF-500 is not modified for TTL-OTF Flash, a second camera is used to measure the film plane illumination. Since it is practically impossible to fire two cameras at the same time, this procedure is performed in a darkroom with the second camera on bulb. The cameras must be fitted with identical lenses working at the same aperture.

ADJUSTMENTS

1. Set up the equipment as shown in the figure.

2. Release the shutter on the test camera and read the EF-500 reading from the dummy camera. Standards are the same as for the normal procedure.
3. If the 18% gray card reflector is not available, make an average of several cameras to establish the center values.

Note: The maximum film reflectance variation from the representative film is 0.7EV.

Note: See the EF-500 instructions for information concerning the DIR-201 photoreceptor for the EF-500.

5. Winding Inhibit Voltage Adjustment
Adjust if IC4 has been replaced.

Standard: $3.6 \pm 0.2V$ ($R_{BAT} = 1/2 V_{BAT}$)

Tools: Voltmeter

Adjustment:

1. Measure and record as V_{BAT} the voltage from (2) to GND.
2. Press the battery check, measure and record as R_{BAT} the voltage from (1) to GND.
3. Change R10 so $R_{BAT} = 1/2 V_{BAT}$.

ADJUSTMENTS

ADJUSTMENTS POSSIBLE AFTER REMOVING TOP COVER

Film Leader Protrusion Pads:
Bridge these pads to leave
leader protruding from the
cartridge.

VR4 Level (A)
VR3 Level (P)
VR2 Level (S)
VR1 Gain Adj.

Aperture Accuracy Adj.

R13 Viewfinder LCD Adj. (check by lifting upper flex slightly)

Horizontal Adj.
(Partial Area Adj.)
Vertical Adj.

R5 Offset Adj.

6. Film Leader Modification (Service Action)

If a user prefers that the film leader not rewind completely into the cartridge, bridge the two pads.

ADJUSTMENTS

7. Partial Metering Area Alignment

Perform this alignment if the eyepiece shutter, IC1, or the main flex has been changed.

Tools: EV Tester (EF-500), FD 50mm f/1.4 lens, point light source plate (black, at least 12 X 18cm, with a 12mm hole in the middle).

Adjustment:

1. Place the point-source plate over the light source on the EF-500.
2. Set the metering area to partial (P), the mode to Program (or AV), the lens to f/5.6, and activate the stop-down slide. (Setting the lens to f/5.6 emphasises the difference between the dead spot in the center of the photo-cell and the sensitive area. This simplifies the alignment.)
3. Square the camera with the light source at the closest focusing distance of the camera. Set the lens focusing ring to the closest distance also.
4. Center the focusing aid on the source and read the shutter speed.
5. Release SW1 and move the focusing aid off-center. Push SW1 again and if the shutter speed drops, the alignment is not correct.
6. Adjust so the light source spot falls within the microprism circle
7. Adjustments are indicated on page 8. (The T70 check can also be used.)

8. Spot Metering Area Alignment

Adjust if mirror unit has been changed. (Only vertical adjustment is possible. Horizontal is determined by parts.) The spot flex, IC2 and fresnel lens are supplied as a pre-adjusted unit, so adjustment is only necessary if mirror unit is changed. Set the sub-mirror eccentric as set in the removed mirror unit and there is almost no problem.

Tools: Same as partial adj., plus New F-1 shutter adjustment spanner (CY9-6136-000)].

Adjustment:

1. After adjusting the main mirror angle, assemble the camera into the operational condition. (The adjustment can be performed with the camera completely assembled).
2. Place the point-source plate over the screen on the EF-500.
3. Set the metering area to spot (S), the mode to Program, the lens to f/5.6, and set the stop-down slide. (Setting the lens to f/5.6 makes the metering spot very nearly round.)
4. Square the camera with the light source at the closest focusing distance of the lens. Set the lens focusing ring to the closest distance also.
5. Center the focusing aid on the point source and read the shutter speed.
6. Move the focusing aid off-center vertically. The upper and lower off-center readings should be the same (within 1EV).
7. Adjust the sub-mirror eccentric stopper through the film aperture (with the shutter open at "B").
8. The main mirror angle has a greater effect on the metering area than the sub mirror, and IC2 and the spot fresnel have a greater effect than either mirror.

9. Offset Adjustment

Perform this adjustment if IC1 is replaced.

Standard: $0 \pm 2\text{mV}$

Tools: Voltmeter

Adjustment:

1. Short MOS IN (p 9) to MOS OUT (p 7), and check the voltage at TP (p 8).

2. If the voltage is greater than $+2\text{mV}$, install a 100K Ohm resistor from either A or B to ground and adjust the resistor voltage at TP is less than 2mV . Install a fixed resistor of the value determined by the variable.

Note: The spot metering IC2 is a factory-adjusted part of the spot flex, so offset adjustment is not required.

10. Aperture Accuracy

Perform this adjustment if AE Unit or main flex is replaced.

Standard: $f/5.6 \pm 0.3f/\text{stop}$

Tools: Standard Tool Lens $50\text{mm } f/1.4$

Adjustment:

1. Set the camera in the AV mode at $f/5.6$. Repeatedly release the shutter and check the aperture set on the lens.
2. If necessary, bridge the appropriate pads as shown by the table. (When replacing the main flex, note the bridged pads and bridge the same pads on the new main flex.)

Correction

①	②	③	Correction
			$+ 3/8$
		○	$- 2/8$
	○		$+ 1/8$
	○	○	0
○			$- 1/8$
○		○	$- 2/8$
○	○		$- 3/8$
○	○	○	$- 4/8$

○: Indicates grounded pad

11. Level and Gain Adjustment

Perform this adjustment if IC4 or the main flex is replaced.

Standard: $0 \pm 0.4F$

Tools: EF-500, AE Standard Tool Lens FD50mm f/1.4, Top cover modified for adjustments (access holes for VR1 - VR4).

Aperture accuracy must be adjusted before this adjustment.

Perform in order, level and then gain.

If the AE Tool lens is not available, see section 11.A.

11.1 Level Adjustment

1. Set the EF-100 to EV12, K=12.5, and ISO 100, and the camera to 1/125, Spot metering and ISO 100.
2. Adjust the level variable resistors so the tool lens pointer stops at f/5.6.
Spot- VR2, Partial- VR3, Average- VR4

11.2 Gain Adjustment

1. Set the EV-500 light source to EV6, the camera to partial metering and 1/2 sec shutter.
2. Adjust VR1 so the tool lens pointer stops at f/5.6.
3. After adjusting both level and gain, check exposure accuracy at EV6, 9, 12, and 15.

11.A. Level and Gain Adjustment (without Tool Lens)

(This adjustment uses the outputs of AR1 and AR2 rather than the tool lens pointer position to make the adjustment. - The procedure is the same.)

Procedure

1. Prepare the circuit as shown and install the temporary top cover.
2. Turn SW1 on and watch the viewfinder LCD while making the adjustment.
3. Change the metering mode by shorting the bottom data back terminal to the film plane ground pin as necessary.
4. In the shutter speed indication, the right 2 digits indicate the output of AR-1 and the left 2 AR-2.
5. As the data back ground (step 3) is opened and closed, the aperture digits indicate the three metering modes, 03(BV-Spot), 02(BV-Partial), 01(BV-Average), then 00(VC), 07(BC), 06(AV EF), 05(EF_{pre}), 04(EF_{others}) and back to 03.

6. For example:

CE ** 01
A B C

A: AR1 output
B: AR2 output
C: Average mode

This shows that the EV12 adjustment of AR1 is correct.
**: AR2 output is not important at EV12.

7. At EV12 the readings should be: D2 in 03 mode, D0 in 02, and CE in 01 mode.

EV	AR1			AR2		
	(A) (01)	(P) (02)	(S) (03)	(A) (01)	(P) (02)	(S) (03)
15	9F	AO	A2			
14	AE	BO	B2			
13	BE	CO	C2			
12	CE	DO	D2			
11	DE	EO	E2			
10	EE	FO	F2	26	28	2A
9				36	38	3A
8				46	48	4A
7				56	58	5A
6				66	68	6A
5				76	78	7A
4				86	88	8A

8. Gain adjustment, at EV6 in partial mode, should give a reading of :

** 68 02
A B C

**: AR1 output is not important at EV6.

Notes: At low brightnesses, AR1 low output is indicated by "FF", and at high brightnesses AR2 output is high and not usable.
AD output of AR1 and AR2 is a 16 bit per EV signal.

12. Viewfinder LCD Adjustment
Perform this adjustment if IC4 is replaced.

Standard: Visual Check

Tools: Variable Resistor (About 10K Ohms), FD Lens

Adjustment:

1. Remove R13 and install the variable resistor in its place.
2. Set the spot metering mode, the lens to "A", and press the spot button to activate the 30 second timer.
3. Adjust the variable resistor so that the segments that should be visible are and the ones that should not be visible are not.
4. Remove the variable, read it and install the closest fixed resistor.

II. Grip Removal

Lozoid #72090 on roller shaft

Remove leads from motor flex
(See pg. 39)

(14)

Slide up to remove.

(12) x 2

(4) x 3

G103 bond

Disengage spring before removing.

Steel balls
grease H-26

(A) & (B) have left-handed threads

Numbers thru (14)

1. Grip Head Unit (5)

Six leads connect the grip head to the motor flex.

2. Grip (14)

Switch Panel Assembly (10) must be removed before Grip (14) can be removed.

III. Main Flex Removal

Disassembly to the extent shown allows the following adjustments to be performed.

Index No.	Adjustment (Page No.)
10	Flash Mode Information (19)
	EV10 Amplifier Switching (20)

1. Main Flex Unit (10) Removal

There are 33 leads, 3 Thru-Hole connections, and direct connections to the shutter flex and the FD flex that must be removed to remove the main flex unit.

Fig. 2

Fig. 3

Thru-hole connections
(Back Cover Switch)

OLC Lamp Connecting Pad

Fig. 4

DETAIL: Early Production (Z12-A04)

Unsolder in this order: Fig. 1,5,4,3,2.

ADJUSTMENTS

1. Flash Mode Information

Adjust when IC4 is changed. (If incorrectly adjusted, the flash mode information will not be correctly sent to camera.)
Perform the EV10 crossover adjustment concurrently.

Tools: D.C. Power Supply, Voltmeter, two 10K variable resistors

Adjustment: (Top & Front Covers Removed)

1. With the camera in operatable condition, unsolder the connections shown in figure 1 on page 17 and the self-timer LED unit. This frees the front tongue of the main flex.
2. Remove R7 from the rear of the flex and install a variable resistor in its place.
3. Resolder the main flex tongue and LED.
4. Close SW1 and measure VC.
5. Install a variable resistor between the CCC terminal and ground (metal part of the eyepiece shutter) The resistance should be set to $VC/150\mu A$.
6. Close SW1 and find the lighting threshold of the flash mark by adjusting the resistor.
7. Remove the resistor, measure it, and install a fixed resistor of that value.

ALTERNATE ADJUSTMENTS

Battery Case and Grip Head Removed.

- A. For power connection, see No. 6 in the Repair Guide introduction.
- B. Install a temporary SW1 as shown in figure 3.

ADJUSTMENTS

2. EV10 Amp Switching

Adjust when IC4 is changed. If incorrect, improper exposure in the area of EV10 is possible even with level and gain adjusted. Perform concurrently with flash mode info. adj.

Standard: $\pm 3/16$ f Limits: (2D 2E 2F ^{Center} 30 31 32 33)
Value (Right TV digits)

Tools: D.C. Power Supply, Voltmeter, 10K variable resistor.

Adjustment: (Top & Front Covers Removed)

1. With the camera in operatable condition, unsolder the connections shown in figure 1 on page 17 and the self-timer LED unit. This frees the front tongue of the main flex.
2. Unsolder La1 leads (pg. 18, fig. 4) from intermediate pads.
3. Remove the three screws from LCD1.
4. Unsolder the connections shown in figure 2 on page 17.
5. Remove resistor R8 (Fig. 2) and replace it with the variable resistor set to R8's resistance.
6. Resolder the connections to make camera operational.
7. Remove the solder bridge from (1) to GND in Fig. 1.
8. Connect Fig. 1 (1) and Fig. 3 (2) with a jumper.
9. Apply about one volt from the AVEF to ground pad (Fig. 3).
10. Close SW1.
11. Set the reading of the AV digits in the viewfinder to 06 by repeatedly shorting the bottom command back terminal to ground. The initial position is 03 and the shift sequence is 03-02-01-00-07-06-05-04-03 etc.
12. Adjust the D.C. power supply so the left TV digits read F8.
13. Adjust the variable resistor so the right pair of digits read 30.
14. Remove the resistor, read it, and install a fixed resistor.

Fig. 1

Fig. 3

Fig. 2

IV. Motor flex, Mirror Box, & Rewind Units Removal

Disassembly to the extent shown allows the following adjustments to be performed.

Index No.	Adjustment (Page No.)
3	AE Overcharge (23) ; Shutter Overcharge (23)
9	AE Set Position (24) AE Set Timing (24) AE Pin Spacing (25) AE Brush Start Position (25) AVO (26)

ASSEMBLY & DISASSEMBLY NOTES

1. Motor Flex (3), DC-DC convertor (15)

CAUTION: Unsolder ground jumper lead from shutter flex to front panel or remove ground screw from front panel.

2. Mirror Box (9) Removal

Back Cover SW Ground pin - Soldered to FD Flex.

Before unsoldering at (A) and (B), remove the DX Flex and unsolder the FD flex from the back cover ground switch pin. (The pin serves as a positioning pin for the DX Flex. Then unsolder (A) and (B). (If forcefully removed the pattern on the underside of the DX flex may be damaged.)

NOTES:

1. Because of the 2nd Curtain sync feature, the shutter should be charged when the mirror box is installed.
2. Post Assembly Checks
 - 1) Apply about 3 volts to the winding motor to wind the mechanism (polarity is not important).
 - 2) Apply about 3 volts to the orange (+) and black (-) leads on the right side* of the mirror box.
 - 3) Apply about 3 volts to the magnet coils to check curtain operation.
 - 1st Curtain: Bottom two contacts, bottom contact is -.
 - 2nd Curtain: Top two contacts, top is +. (Will not operate if polarity is reversed.)

*: Viewed from the front.

ADJUSTMENTS

ADJUSTMENTS POSSIBLE AFTER REMOVING MOTOR FLEX

1. AE Overcharge

Standard: 0.9 - 1.1f

Tools: AE Tool Lens , DC Power Supply

1. Install the tool lens.
2. Apply 1.5 volts to the charge motor. (Attach the minus (-) from the D.C. power supply to the motor plus (+) for low gear operation.)
3. If not within tolerances, change the adjusting collar

This adjustment assures that the AE, automatic diaphragm, and mirror mechanism have sufficient overcharge.

Collars: (A): AE Overcharge
(B): Shutter Overcharge
(C): AE Overcharge

(If (A) is used to adjust overcharge, there should be space between shutter charge lever and main charge lever when the charge cam is at its maximum. After adjustment (A) must have some possible movement in the normal direction.

Fig. 1: Charge Complete

2. Shutter Overcharge

Standard: Fig. 2

Tools: DC Power Supply

Adjustment:

1. Apply 1.5 volts to the charge motor.
2. If not within tolerances, change the adjusting collar (Fig. 1).

The 1st curtain sets first and then the 2nd curtain. To insure proper setting of the 2nd curtain, after adjustment (B) must have some possible movement in the normal direction (Fig. 1).

Fig. 2

ADJUSTMENTS

ADJUSTMENTS POSSIBLE AFTER DISASSEMBLING THE FRONT PANEL UNIT

Of the front panel units the AE unit and mirror mechanism (mirror 45° angle) require adjustment. Lubricate lever friction surfaces with Lozoid #72090, but use a small enough amount to insure against splatter.

When the AE unit is replaced, check AE eccentric gap, AE overcharge, and maximum aperture pin height. The other points are guaranteed by individual parts tolerances.

1. AE Set Position Adjustment

Standard: $0.4 \pm 0.2f$ (with $f/1.4$ lens)

Tools: AE Tool Standard Lens

Adjustment

- 1) Attach a tool standard lens, and charge the front panel.
- 2) If the tool lens pointer does not stop within the limits adjust the eccentric.

Notes: This adjustment is not normally necessary. Close parts tolerances insure that it is usually correct.

1.4

 Limit
 ($0.4 \pm 0.2F$)

Notes: This adjustment also affects the other AE unit adjustments: AE set timing, AE start position, and AE overcharge.

If a tool lens is not available, install an ordinary standard lens (to place a load on the aperture signal charge lever) and adjust to obtain seven turns plus six teeth, ± 1 tooth (1 tooth = 0.1f; 1 rev. = 1.2f).

2. AE Set Timing

Standard: AE set position: $0.4 \pm 0.2f$
 Front Panel's various levers setting: within 0.6f
 AE overcharge: $> 1.1f$

Tools: AE Standard Tool Lens

Adjustment

- 1) AE set timing must be adjusted so that the above standard are met.
- 2) Attach a tool lens, and adjust by changing with the AE set timing collar. (Ref: T80 R.G. pg. 14)

Note: This collar adjustment affects the other front panel adjustments. If the tool lens is not available, be very careful with this adjustment. Adjust by counting the stop gear teeth.

3. AE Eccentric Gap Adjustment

Standard: 0.05 - 0.1mm

Adjustment:

With the mechanism wound, adjust with the eccentric.

4. AE Start Position

Standard: Infinity Resistance between (1) & (2).

Tool: FD standard lens

Adjustment:

Loosen AE brush screw and adjust brush position. Baising the adjustment toward the left helps prevent unnecessary error mark display.

Always check after other AE unit adjustments are made.

ADJUSTMENTS

5. AVO Adjustment

- 1) Connect the plus (+) probe of a multimeter to the gray lead (AV08) from the AE unit and ground the minus (-) probe to a metal part of the front panel.
- 2) Set a depth gauge to 7.025 mm and check whether the AVO height is correct by confirming that switching between the f/2.5 and f/2.8 levels occurs within ± 0.03 mm of this height.
- 3) AVO is adjusted by means of a screw inside the maximum aperture compensation pin. (The screw is locked with G103; dissolve it with keton.) After making the adjustment, paint the screw with G103.

Note: If a depth gage is not available use a known-good f/1.8 lens and f/2.0 lens and adjust so the correct maximum aperture is displayed on the external LCD.

V. Drive & DX Sensor Units Removal

1. Drive Unit (9)

- 1.1 Disassemble and reassemble with the shutter charged.
- 1.2 By removing sprocket screw (3) and screws (7) and (8), the unit can be removed.
- 1.3 Reassembly is facilitated if extensions are soldered to the winding motor leads before removal.
- 1.4 No-load Currents (6V Input)

Winding Motor:	High:	< 70mA (Spool turns)
	Low :	< 50mA (Spool & Sprocket turn)
Charge Motor:	High:	< 200mA
	Low :	< 180mA

Reverse polarity for high/low switching.

1.5 Post-assembly Checks

- 1) Both sprocket and spool should have a little thrust play.
- 2) Apply 6V to both motors and check operation of the sprocket, spool, and charge mechanism.

2. DX Unit (15)

- 2.1 Only the complete unit is stocked.
- 2.2 Before disassembling the camera, check the LCD display with cartridges coded for ISO 100 and 1000, 12 and 20, or 24 and 36 exposures.
- 2.3 With the uninstalled unit check continuity between the pin pairs and pin to flex connections.

Continuity between pin pairs
Continuity between like numbers of pins and DX flex connections.

VI. Shutter Unit Removal

1. AL Cover Spring Adjustment
Tension with the cover roller 2 -3mm away from the spool should be 65-80g. If too weak, film will wind too loosely at low temperatures. If too strong, film will not load with the proper initial offset. This also will result in loose winding onto the spool.

2. Film Guide Shaft (14) Adjustment
The shaft diameter should be the same as the width of the inner guide rail ± 0.1 mm. If the shaft is replaced, use the same size. When the body is replaced, select the correct size.

3. Shutter Unit
Charge torque must be less than 1220gcm.
If the shutter is removed with the drive base attached, they should be in the charged condition.
When the shutter is replaced, attach the drive unit and check overcharge before installing the new shutter. (1st curtain sets first and then 2nd curtain. 2nd curtain should have some play.)
The shutter can be removed after the front and top covers, charge motor, and main flex are removed.

Adjust so no part of the LED is masked by the open shutter.

Apply G-103 bond to (14), (15) and (16). Arrows indicate the direction in which parts should be held when installed. [Ex: (3)-11 should be held close to pentaprism when installed.] Camera must be in operating condition before LEDs and LCDs can be checked.

Numbers: Thru (17)

VIII. Mirror Box Disassembly

In principle, this mechanism is like the A and other T series cameras. Operate the mirror box several times to learn the lever operation before disassembling it.

- (18) - Adj. Collars
(A), (B), (C), & (D)
A - Lateral Play: 0.1mm
B - 0.1mm space between sub and main mirror when up.
C - Main mirror to cushion + 0.2, - 0.3mm
D - Sub mirror return spring at center of mirror edge: 2 to 3 g

Can be removed after removing automatic diaphragm unit (4)

IX. Drive Unit Disassembly

Pre-assembly Shutter Check
(Place unit in a body and connect leads)

1st Curtain TT: $2.7 \pm 0.1\text{ms}$
2nd Curtain TT: $< 0.03\text{ms}$ fast
X sync: $0.2 - 0.3\text{ms}$
Note: Body is used as mounting stand.

Apply 2 -3V to each coil
MG min. hold voltage $< 2\text{V}$

(4) Before disassembling (6) detension the blade drive springs by backing off about 12 turns on the worm gears.

Push levers (6)-3,4 to the left when installing (2).

Unsolder 4 points (A) and remove three screws (1). (2) can be removed intact.

2nd Curtain TT worm gear

X sync unit

1st curtain switch spring

(6)-1x2

1st Curtain TT worm gear

X. Shutter Unit Disassembly (Cont.)

Lube: Two lubricants are used in the shutter. H-26 is used on shafts and lever friction surfaces that are under a fairly heavy load. Astro-oil is used on shafts where smooth operation is essential and the load is very light.

X. Shutter Unit Disassembly (Cont.)

Assemble and disassemble in released condition
When changing shutter blades apply a small amount of Astrooil to the pivot shafts.

T90 SERVICE PARTS POLICY

THE POLICY OF CAMERA SERVICE, TOKYO, IS TO STOCK ALL PARTS NECESSARY TO EFFECT EFFICIENT ECONOMICAL SERVICE. IT IS NEITHER NECESSARY NOR TECHNICALLY FEASIBLE TO STOCK SEPARATELY EVERY PART THAT GOES INTO EACH PRODUCT.

IN ESTABLISHING THE SPARE PARTS LIST, WE CONSIDER REPAIR DIFFICULTY, LABOR COST, SPECIAL TOOL REQUIREMENTS AND INDIVIDUAL PARTS Vs. ASSEMBLED UNIT COST TO DETERMINE IN WHICH FORM PARTS WILL BE STOCKED.

PARTS LINE ITEMS: Approx. 500 (INCLUDING 380 NEW PARTS)

1. THE UNITS LISTED BELOW ARE STOCKED AS UNITS BECAUSE THEY REQUIRE TOOLS OR TECHNICS NOT NORMALLY AVAILABLE AT FIELD SERVICE LEVEL.

CG1-0860-000	FOCUSING SCREEN E	CG9-2684-000	FRONT COVER ASSY
CG1-0868-000	AUTO DIAPHRAGM UNIT	CG9-2685-000	SELF TIMER LED ASSY
CG1-0869-000	AE UNIT	CG9-2686-000	SPOOL ASSY
CG9-2670-000	AL COVER ASSY		
CG9-2673-000	DX SENSOR ASSY	CY1-1234-000	DTTL/SPOT FLEX ASSY
CG9-2675-000	ROLLER HOLDER ASSY	CY1-1248-000	1ST CURTAIN BRAKE ASSY

CG9-2672-000	MOTOR SIG. BASE ASSY	CY1-1253-000	FINDER FLEX ASSY

3. INDIVIDUAL ELECTRICAL COMPONENTS WHICH MAY REQUIRE REPLACEMENT ARE STOCKED. OTHERS ARE LISTED ON THE SCHEMATIC WITH THEIR SPECIFICATIONS.

4. THE SPARE PARTS LIST IS ADJUSTED PERIODICALLY TO INSURE THE NECESSARY PARTS ARE ALWAYS AVAILABLE, AND UNNECESSARY PARTS ARE REMOVED FROM THE STOCK LIST. A COMPLETE REVIEW WILL BE CONDUCTED ONE YEAR AFTER MARKETING.

5. ASSEMBLIES SHOWN WITH THE N.S. MARK ARE SHOWN FOR CLARITY ONLY. THEY ARE NOT STOCKED IN THE FORM SHOWN.

キヤノン T90 サービス部品設定について

サービス部品は修理上の精度、工数、コスト、部品の使用頻度等、諸々の事由を勘案し設定している。

特にユニット部品の構成部品中で、使用頻度の少ないものはサービス部品とはしない。

キヤノン T90 においては次のような設定部品とする。

部品設定点数 約 500 点 (新規部品 約 380 点 流用部品 約 120 点)

1. 下記部品はユニットのみをサービス部品とする。

CG9-0860-000	フォーカシングユニット (E Type)	CG9-2684-000	前カバーユニット
CG9-0868-000	自動絞りユニット	CG9-2685-000	S-LED ユニット
CG9-0869-000	AE ユニット	CG9-2686-000	スプールユニット
CG9-2670-000	AL カバーユニット		
CG9-2673-000	D センサーユニット	CY1-1234-000	調光フレキユニット
CG9-2675-000	ローラーホルダーユニット	CY1-1248-000	先幕ブレーキユニット
CG9-2679-000	絞り込みユニット	CY1-1249-000	後幕ブレーキユニット
CG9-2680-000	アイピースユニット	CY1-1250-000	シャッターフレキユニット
CG9-2681-000	アイピースシャッターユニット	CY1-1251-000	シャッター MG ユニット

2. 下記部品はユニット及び使用頻度の高いと考えられる部品をサービス部品とする。

CG1-0851-000	上蓋ユニット	CG9-2677-000	キャップユニット
CG1-0852-000	背蓋ユニット	CG9-2683-000	電池蓋ユニット
CG1-0857-000	モーターフレキユニット	CG9-2689-000	ミラーユニット
CG1-0867-000	ミラー QR ユニット	CY1-1232-000	巻戻しユニット
CG1-0871-000	シャッターユニット	CY1-1252-000	メインフレキユニット
CG9-2672-000	信号地板ユニット	CY1-1253-000	FD フレキユニット

3. 電気素子の一部のものは、サービス部品としないが修理時のチェックが出来るよう定格を明示している。(ELECTRIC PARTS & LEADSのPARTS LISTを参照)

4. 当初、サービス部品設定されていない部品でも状況に応じ、サービス部品として追加することもある。尚、今回は特にユニット部品のみを多く設定してあるので発売 1 年後に部品設定の見直しを行う。

5. ユニットの一部で、サービス部品としないものは N.S マークをつけてある。
